The Factory Install PRECISION gives you the flexibility of having a 4iiii power meter installed onto a crank you supply. Through our custom install process, PRECISION 3 can be installed on a wide variety of crank arms. We'll work ...

Theoretically you can try fitting crank based power meter with FSA Megaexo spindle (Gossamer power2max Type S). But it might be very tight fit and honestly I wouldn't use hammer on my power meter crank spider. There are also adapters for fitting GXP spindle (Quarq) to Shimano BB. Those are just workarounds though.

I now have a power meter on each of my two main bikes. My pure race bike (a Specialized Tarmac SL4) has a PowerTap GS rear hub and my all-road / adventure bike (a Specialized Diverge FutureShock) has a Stages left-hand crank (the latest generation since it was recently replaced under warranty).

Schoberer Rad Meßchnik is the original Power Meter! SRM Power Meters set the gold standard for performance training in cycling. Our Training System is intended to take your training and racing to the next level by incorporating ...

With +/- 1% accuracy, 4iiii is the only crank-based power meter to use 3 strain gauges to measure all forces in your pedal stroke. Automatic Terrain Selector. Detects the terrain you're riding on for more responsive cadence and power ...

Crank power meter battery model

In addition, with a power sensor located separately on both crank arms, the power meter can measure forces generated by each leg individually. This 4iiii power meter is accurate to +/- 1.0%, features dual ANT+ and Bluetooth SMART and is extremely lightweight, adding only 40 grams to the Shimano DA 9200 crankset.

Power Matters. Sure, knowing how many watts you can put out is cool, but what's the real reason you need a power meter? For starters, power is the only absolute measurement of your performance. It measures, in watts, how hard ...

The bolt and self-extractor nut from the non-power meter cranks are not compatible with the INpower axle. If you have purchased the left-crank assembly with the axle because you already have ROTOR cranks, you need to substitute the old bolt and self-extractor nut with the new washer, bolt and self-extractor nut included in the INpower package.

The tool comes with the power meter (regardless of whether you purchased a complete S-Works bike or power meter on its own). Your Specialized Dealer will be able to help. On the dual sided power meters there ...

Compatible with Shimano cranksets, the Precision 3.0 uses the same spec of power meter regardless of whether it's fitted to a 105 crank (which we tested) or a Dura-Ace model.

Power Matters. Sure, knowing how many watts you can put out is cool, but what's the real reason you need a power meter? For starters, power is the only absolute measurement of your performance. It measures, in watts, how hard you're pedaling, which lets you monitor your effort in real-time while riding.

Battery Type. Most power meters run on disposable batteries or rechargeable ones. You'll most likely get 200-400 hours of run-time before you need to replace the battery. ...
